

CONSTRUCTION CLAIMS AND DISPUTES

Build your construction case *from the evidence.*

For construction claims and commercial teams, working with solicitors, counsel and experts.

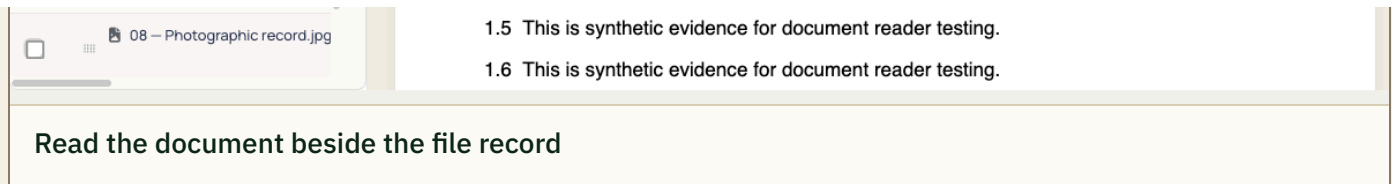

Bring together project correspondence and documents, examine the chronology, and prepare claims and responses with the supporting records alongside your work.

See how VeriCase works ↗

The screenshot displays the VeriCase software interface. On the left, a sidebar shows a file list under the heading 'Fil... / Riverside Construction Disp...'. The list includes files such as '01 - Main contract and particulars.pdf', '02 - Extension of time application restrictions and supporting...', '03 - Updated construction p...', '04 - Site meeting minutes, 1. 2025.pdf', '05 - Payment certificate and schedule.pdf', '06 - Subcontractor notice o', and '07 - Drawing register.xlsx'. The main area on the right shows the document viewer for '01 - Main contract and particulars.pdf'. The viewer has tabs for 'Document', 'Details', 'Text', 'Revisions', 'Notes', and 'Curation'. Below the tabs, there are navigation controls: 'Previous page', '1 of 3', 'Next page', and zoom controls ('-', '+', 'Fit width'). A search bar 'Find in document' and a 'Find next' button are also present. The document content shows the title 'VERICASE / SYNTHETIC TEST DOCUMENT' and a section titled 'Construction agreement' with four numbered items: '1.1 This is synthetic evidence for document reader testing.', '1.2 This is synthetic evidence for document reader testing.', '1.3 This is synthetic evidence for document reader testing.', and '1.4 This is synthetic evidence for document reader testing.'

Document reader, September 2026. Illustrative records in a captured application view.

Spend more time assessing the case.

When a referral arrives or a response is due, the team needs to establish what happened and find the records that support its position.

VeriCase brings evidence review, chronology and drafting into one workspace. Follow the record, investigate the disputed points and develop the work with its sources close at hand.

Three jobs, one place.

Find the record

Bring together project correspondence and documents. Search and narrow the material around the issue you need to investigate.

[Explore record preparation](#) ↗

Inspect the source

Read the message or document behind a finding. Check its date, context and what it actually establishes.

[Explore source review](#) ↗

Use the evidence

Develop a claim or response with the supporting records alongside the work. Review the wording and sources before sharing it.

Explore claims preparation ↗

AI helps find and draft. Your team checks the evidence and approves the work.

PREPARATION AND CHRONOLOGY

Put the project record in order.

Bring project emails, attachments and documents into a record your team can work through. Examine correspondence in date order and return to the source when a date, instruction or account needs checking.

A delivery forecast, an instruction and a confirmation can sit in different mailboxes. Reading them together helps the team distinguish what was expected from what the record says happened.

Threading and quoted-text handling help make correspondence easier to follow. Duplicate handling and relevance controls reduce repeated material in the review view; your team checks the selection.

Bring the records together

Work with email archives and individual messages, their attachments, PDFs, Word documents, spreadsheets and images. Text recognition helps make scanned pages searchable.

Follow the correspondence

Read messages in context, with threading and quoted-text handling to help distinguish a new reply from earlier correspondence.

Review repeated material

Duplicate handling can set repeated messages aside. Near-duplicate checks cover certain similar messages; review exclusions when assessing the record.

Focus on the matter

Use dates, search terms and relevance controls to narrow the records under review. Check the scope before drawing conclusions from what you find.

Examine the sequence

Use the chronology to compare dates and follow the underlying records. The team assesses what an event establishes and how it affects the claim.

Select the supporting records

Choose the material needed for the next stage of the work. Review the selected sources and the contents of any download before sharing them.

File search, September 2026. The highlighted matches and document records are illustrative.

RESEARCH WITH A ROUTE BACK TO THE RECORD

Investigate the point. Check the source.

Ask a focused question about the project record: what was instructed, when a delivery date changed, or what the parties said about an issue. Use the findings and their source references to decide what needs closer examination.

A summary is only useful when the team can check the records behind it. Read the underlying message or document before relying on a finding.

Collect the material that supports the point, alongside records that qualify or contradict it. Your team decides what the evidence establishes.

01 Define the question

Set out the issue and the records you want to examine. Review the proposed scope and refine it before proceeding.

02 Read and check

Examine the findings and follow source references back to the evidence. Check the context, dates and qualifications, as well as the passage cited.

03 Collect what matters

Select useful records for the work ahead. Review the selection and any reported gaps; a set of search results is not a complete account of the matter.

Test the other side's account against the record.

Examine an opposing submission and the factual points it makes. Rebuttal helps investigate those points and prepare proposed replies with supporting and contradictory records for your team to review.

Under time pressure, a team answers first the points it can evidence quickly, and the rest risk being answered thinly.

Check the source, the proposed response and any gaps in the evidence before deciding how to answer the point.

Drafts are proposals for a qualified person to review. Responsibility for what is served stays with its author.

Prepare the claim or response with its evidence.

Develop the narrative around the points your team needs to establish. Organise the work into sections, examine proposed wording and keep the supporting records close to the argument.

Use the draft as working material: check its sources, resolve gaps and revise the argument before issuing it. Your team remains responsible for the final document.

Structure the argument

Develop the claim or response in sections, bringing the relevant facts and evidence together for each point.

Check the supporting material

Use source references to examine the record behind the wording. Check that each source supports the point being made.

Find evidence for the work

Investigate the records for the issue you are drafting. Select useful evidence and examine material that challenges your position.

Review the output

Review the document and its source references before exporting or sharing it. Keep professional judgement with the people responsible for the submission.

As-built evidence package

Delay events and supporting records

Illustrative export preview. This sample demonstrates report formatting; it contains no findings about a real dispute.

One workspace for the whole team.

The narrative is drafted in one place, the evidence is kept in another, and the argument about the evidence happens in a reply-all thread.

Discuss a record with colleagues in the workspace, so the conversation stays connected to the material being reviewed.

Who it is for

For construction claims consultants and contractors' commercial teams, working with solicitors, counsel, quantum and other experts, and in-house legal advisers.

Keep the source in view.

A persuasive argument needs a record the team can examine.

Follow source references, review the material selected for an output and check access arrangements before bringing colleagues into the work.

A bundle assembled by hand at midnight is where exhibits can go missing, pages can be misnumbered and a citation can point to the wrong document.

Review the contents of a bundle or report before it leaves the team, including the source references and any qualifications.

Check the record behind the finding

Read the source in context before relying on an extract or an AI-assisted finding.

Review what you share

Check the selected documents and the output itself. A report, an evidence selection and a bundle serve different purposes.

Agree access for the team

Discuss how the workspace will be used by your commercial team, claims consultants and legal advisers, and which records each person needs.

Work alongside your existing systems.

VeriCase supports evidence review and case preparation for construction claims and disputes. Use it alongside your document and disclosure systems, with the team deciding what to take forward and how.

Professional judgement stays with your team

AI-assisted findings and drafts need professional review. Your team assesses the evidence, the contractual position and the argument; admissibility and weight remain matters for the tribunal.

The people behind VeriCase.

Our team brings together construction claims, legal, commercial and software development experience.

William Rogers MCI Arb

Co-Founder · Claims, Forensic Quantum & Testifying Expert

William brings more than 15 years of construction claims and disputes experience across infrastructure, water, power, rail and residential projects. A quantity surveying and commercial management specialist and Member of the Chartered Institute of Arbitrators, he acts as a testifying quantum expert. His work spans adjudication, arbitration and TCC litigation. He brings the practical

demands of preparing evidence, developing claims and briefing experts and counsel into VeriCase's product direction.

Full profile and experience

A construction claims and disputes specialist with over 15 years across the water, power, rail, infrastructure and residential sectors, qualified in quantity surveying and commercial management and a Member of the Chartered Institute of Arbitrators. He founded his first commercial management consultancy in 2016 and has since built Meritus Group, Orrery Group, Peak Developments and VeriCase, a legal technology platform combining forensic evidence review with a chronology engine built to the SCL Protocol. His portfolio spans adjudication, arbitration and TCC litigation under NEC, JCT, FIDIC and IChemE forms, with live instructions in excess of £100m across residential, regeneration and infrastructure schemes, and prior roles on international arbitrations exceeding \$600m. He acts as a testifying quantum expert and leads claims and recovery across a national contractor's distressed portfolio, preparing each case in house so that experts and counsel are instructed only when it is ready.

Warren Kemp

Co-Founder · Dispute Resolution | Partner, gunnercooke LLP

warren.kemp@gunnercooke.com [+44 \(0\) 7470 332 945](tel:+44207470332945)

Warren is a construction and engineering disputes solicitor and a partner at gunnercooke LLP. His practice spans adjudication, arbitration, mediation and TCC litigation, advising contractors, developers, consultants and insurers. Previously joint head of construction and engineering at DAC Beachcroft, he brings more than twenty years of legal practice to VeriCase. His contribution centres on the commercial judgement, evidential discipline and clear argument that construction disputes require.

Full profile and experience

Warren is a construction and engineering disputes solicitor of more than twenty years' standing, admitted in 2002, who advises developers, contractors, subcontractors, professional consultants and their insurers across the public and private sectors. He trained and built his practice in Newcastle, first at Watson Burton and then at DAC Beachcroft, which he joined as a partner on 01 November 2013 and where, with James Harrison, he established the firm's Newcastle construction practice and grew it to more than 25 specialist construction lawyers. He went on to lead DAC Beachcroft's national construction and engineering team jointly with Mark Roach, a practice of over 50 senior lawyers in the United Kingdom and internationally, until joining gunnercooke LLP in February 2024. His work spans adjudication, arbitration, mediation and Technology and Construction Court litigation, together with the professional indemnity dimension of construction claims and the non-contentious drafting that prevents them. He is ranked in Chambers UK and The Legal 500, which has described him as "simply the best around", and he writes regularly on construction law, including on CC Construction Limited v Mincione and on the contractual treatment of anaerobic digestion plants. Warren acts, among his various roles, as General Counsel to United Living, a business approaching £1bn turnover with a

telecoms division, and previously spent 18 months in house on secondment at the global consultancy WS Atkins. He combines a pragmatic, commercial approach with the tenacity to see a dispute through to decision.

Malcolm Brechin

Managing Director · Commercial Strategy & Go-to-Market

Malcolm brings more than 25 years of experience in commercial strategy and taking technology products to market. His career includes leadership roles at OfficeTeam, OT Group and Mobile Rocket, working across sectors including healthcare, recruitment and government. As Managing Director, he focuses on understanding customers' operational needs and translating them into practical products, working with the team to make VeriCase useful and commercially relevant to the organisations adopting it.

Full profile and experience

Malcolm is a commercial strategist with more than 25 years' experience building and scaling technology businesses across finance, retail, healthcare, hospitality and government. His career has centred on taking products to market: as business development director at OfficeTeam he led a national sales team and secured the William Hill distribution outsourcing contract; as National Director of New Business at OT Group he positioned the business on the Crown Commercial Service Tail Spend Solution framework; and as Director of Strategic Development at Mobile Rocket he led the go-to-market for its recruitment and healthcare platforms, now used by Amazon, Waitrose and the NHS, during the period in which the company was shortlisted for Recruitment Technology Innovation of the Year at the Recruiter Awards 2023. In 2025 he established NE Tech in County Durham, rebranded as Invent Group in 2026, which has since released VeriCase, Bid King and Schools-safe. Malcolm's focus is on identifying real operational challenges and turning them, in partnership with clients, into practical and commercially viable technology.

CREDENTIALS AND TRACK RECORD

- CEO, NE Tech, rebranded Invent Group (2025)
- Director of Strategic Development, Mobile Rocket
- National Director of New Business, OT Group
- Business Development Director, OfficeTeam
- Over 25 years in commercial strategy and go-to-market leadership
- Published on AI adoption, Invent Group (18 August 2026)

Sam Whisker

Chief Technology Officer · AI Implementation & Product Engineering

Sam is a software engineer and AI specialist with experience taking products from early ideas to working systems. A Teesside University graduate and former Chief Technology Officer at Mobile Rocket, he has worked on recruitment and workforce platforms and, since 2024, focused on AI implementation. As Chief Technology Officer, he leads the engineering behind VeriCase, bringing software development and applied AI together around the needs of complex casework.

Full profile and experience

Sam is a software engineer and AI specialist who has spent his entire career writing code that changes how organisations operate. A Teesside University graduate, he began as a senior PHP developer at Stockton-based web development firm Koodoo Creative before becoming Chief Technology Officer of Mobile Rocket, the Newton Aycliffe company whose recruitment and workforce platforms are now used by organisations including Amazon, Waitrose and the NHS. During his time as CTO, Mobile Rocket was shortlisted for Recruitment Technology Innovation of the Year at the Recruiter Awards 2023. Since 2024 he has concentrated on AI implementation, advising businesses in sectors from manufacturing to recruitment on process automation, custom GPT systems and AI-driven workflows. In 2025 he started NE Tech, now Invent Group, with Malcolm Brechin and leads its technology, building AI products including VeriCase, for managing complex legal disputes, and Bid King, for tenders and proposals. Sam’s strength lies in moving ideas from prototype to working, scalable systems that deliver measurable gains in operational efficiency.

CREDENTIALS AND TRACK RECORD

- CTO, NE Tech, rebranded Invent Group (2025)
- Chief Technology Officer, Mobile Rocket, from 2013
- Shortlisted, Recruiter Awards 2023 (Mobile Rocket, as CTO)
- Independent AI implementation consultant since 2024
- Teesside University graduate; developer since 2008

Common questions

▼ What can we work with?

Email archives and individual messages, PDFs, Word documents, spreadsheets and images. Scanned pages can be read using text recognition. We can discuss your record types and preparation needs during a demonstration.

▼ Can VeriCase help draft a claim or response?

Yes. It can help develop wording and identify supporting material. Your team checks the sources, revises the argument and approves the final document before it is issued.

▼ Does VeriCase replace our disclosure platform?

VeriCase supports evidence review and case preparation alongside your existing systems. Your team decides what material to take into its disclosure or review platform.

▼ Will the output be accepted by the tribunal?

Admissibility and weight are for the tribunal. Review the underlying records, the source references and the final document with the professionals responsible for the matter.

▼ How can our team work together?

Discuss records with colleagues in the workspace and involve the advisers needed for the work. During the demonstration, we can discuss the access arrangements for your team.

▼ What should we check before using client material?

Ask us about hosting, access, retention and AI processing during your demonstration. Please use sample material until the arrangements for your organisation have been agreed.

Bring the problem you need to solve.

Tell us whether you need to organise project correspondence, investigate an issue or prepare a claim or response. We will show how to locate a record, inspect its source and use the evidence in your work, using sample material.

Please use sample material until confidentiality and data arrangements for your organisation have been agreed.
